SUMMARY

Full-stack developer (MERN) with production internship experience building a live service marketplace. Shipped REST APIs, responsive React UIs, and MongoDB data layers for real users. Seeking a full-time role where I can write code that ships.

EXPERIENCE

Software Developer Intern — 6Origin, Nagpur Nov 2025 – Dec 2025

- Delivered 5 production **REST API** endpoints for service listing and booking (Node.js + Express.js + MongoDB), reducing server response time ~30% via aggregation query optimisation.
- Built 4 responsive **React** UI components for service browsing, cart, and booking confirmation — verified across mobile, tablet, and desktop with manual regression test cases before each PR merge.
- Integrated MongoDB-backed user auth and service-listing data layer enabling end-to-end booking flow, by modelling NoSQL schemas and connecting Mongoose queries to REST API routes.
- Collaborated in a 4-person team over a **2-month sprint** using an agile branching strategy on **GitHub** — feature branches, structured PR reviews, and zero main-branch breakage through the delivery deadline.

PROJECTS

UrbanEats — Video-Feed Food Discovery & Ordering App Solo · 2025

React · Node.js · Express.js · MongoDB · REST APIs · JWT Auth · Git | [github/Aditya-collabs/UrbanEats](#)

- Architected and shipped a full-stack food discovery platform solo — designing 4 route modules with **13 REST API endpoints** across auth, food feed, social interactions, and partner profiles using Node.js and Express.js.
- Built a **dual-role auth system** (separate user and food-partner flows) with JWT-based session management, protected routes, and auto-redirect logic — covering 7 auth endpoints including register, login, logout, and session check.
- Implemented a **TikTok-style video food feed** with auto-play scroll in React, plus like/save/unsave interactions backed by MongoDB — state updates reflected live in the UI without page reloads.
- Developed a **food-partner portal** with video upload, in-browser preview before submission, and a partner profile page fetching content via dynamic API routes — across 13 React components.

SKILLS

Proficient	React · JavaScript (ES6+) · Node.js · Express.js · MongoDB · REST APIs · JWT Auth · HTML/CSS · Git/GitHub
Familiar	TypeScript · SQL · Postman · Agile/Sprint workflows · C/C++
Exposure	Docker · Firebase · CI/CD · MLOps concepts

EDUCATION

B.Tech Computer Science Engineering — GH Rasoni College of Engineering, Nagpur Expected 2028

CGPA 7.3/10 · Coursework: DSA · DBMS · OS · OOP

HSC (State Board) — Shri Datta Vidhya Mandir, Buti Bori 74.5% · 2023

SSC (CBSE) — St Claret School, Buti Bori 72% · 2021

CERTIFICATIONS & RECOGNITIONS

- JPMorgan Chase Software Engineering Job Simulation** (Forage, 2024) · Credential: dxMdc3jZ4maxa5rx — Set up local dev environment; fixed broken TypeScript files; used JPMorgan's Perspective library to build a live stock-price data visualisation dashboard for traders using React and Python.
- Machine Learning Operations (MLOps) for Generative AI** (2025) · Credential: 24631179 — Completed training on MLOps practices for GenAI pipelines including model lifecycle management, CI/CD for ML, and deploying and monitoring generative AI models in production environments.
